ABOUT ME

Master of Computer Science graduate eager to apply technical expertise within a professional game programming environment. Actively develops skills through continuous learning and practical experience. Holds a particular interest in game development, while remaining open to a broader range of opportunities within the software development field.

SKILLS

Programming Languages:

- C# (Advanced), Python (Advanced)
- C++, JavaScript, TypeScript (Intermediate)
- PHP, Lua (Basic)

Tools: Unity, Git, Conda, Unreal Engine, Blender, Vue.js

Languages: Italian, English, Spanish

Soft Skills: Teamwork, Fast Learner, Problem Solving, Adaptability

EDUCATION

2021/09 - 2025/12 **Master's Degree in Computer Science, University of Milan, Italy**
Advanced expertise in machine learning, AI, data analysis, software engineering.

2017/09 - 2021/04 **Bachelor's Degree in Multimedia Sciences and Technologies, University of Udine, Italy**
Technological skills for multimedia systems design.

WORKING EXPERIENCE

2021/06 - 2021/12 **Full Stack Developer (stage) – Wecove: Industry 4.0**
A 6-month internship at Wecove, a company that applies systems for Industry 4.0 for transport and sewer cleaning trucks. My role within the team was to develop the frontend and manage the backend of an application that provides general information about the vehicles' conditions. Used Android Studio.
`[JavaScript/TypeScript/Vue.js]`

PROJECTS

2024/11 – 2025/12 **Self-paced curriculum RL for an autonomous racing superbike game – Master's Thesis** – VRider SBK
Developed an autonomous racing agent for VRider SBK using Self-Paced Curriculum RL; achieved faster lap times vs. baseline algorithm. Used PyTorch, Unity ML-Agents.
Accepted (spotlight) at the Workshop on Generalization in Autonomous Driving — IEEE ICRA 2026
`[Python/Unity - C# - Reinforcement Learning]`

2024/04 **Astral Abyss – Group Project** – **Game Jam**
Developed: Enemy AI (Hierarchical State Machine). Itch.io prototype page.
`[C#, Unity]`

2023/10 – 2024/02 **A Cat's Vacation – Group Project**
Developed: Save system - Player environment interaction; Enemy AI (Hierarchical State Machine) - Performance optimization. Itch.io prototype page.
`[C#, Unity]`

2023/04 – 2023/06 **Catnipped – Group Project**
Developed server networking (Unity Relay) - Server-authoritative state machine - Priority-based Interaction system - Client-server RPC architecture - Session/connection management. Itch.io prototype page.
`[C#, Unity]`

2020/06 – 2021/04 **Generation of procedural scenarios for an RPG-type video game – Bachelor's Thesis**
Developed: Procedural dungeon generation (Random Walker, 5 map types) - enemy AI (BFS pathfinding) - Inventory/equipment system - Save system - Level progression.
`[C#, Unity]`
